Hello,

The NRC vessel is currently stationed at target location PDI-AR-A21 (SIL array). The receiver is cabled and Pre-RD was concerned that the spring water line would be too high, so they moved the cable approximately 4ft higher (on shore). Included are photos of the target location.

Receivers A22, A23, and A24 have been retrieved this morning. Data has been downloaded, tilt angle, battery life, memory storage, as well as GPS retrieval and deployment coordinates were taken for each receiver.

AECOM rep explained that they do not anticipate using divers this week.

Jonni
